

COMP 3350 Project Iteration 0

Group 6(ROSE)

Vision:

6.5/7

- Vision summary
- Vision statement
- Does it conform with the interview?

The vision statement is quite well thought of and according to the description provided by the client in the interview. However, half mark has been deducted for not providing the vision summary document in an acceptable format.

Planning:

7.5/8

- Big user stories for all iterations
- Detailed user stories for iteration 1
- Does it follow the preferences of the customer based on the interview?

User stories are generally written in high level for understanding; abstracting technical details. And then the detailed user stories are further break up of big stories depending on the complexity of the former. For example a big user story could be “setting up recipe management” and then the detailed user stories of this one “setting recipe view”, “searching and sorting recipe” etc. Also, a good way of organizing user stories is to group them by area. For instance the user stories Modify, View, Rate, and Sort Recipes can be assigned an area “Recipe Management” so that you don’t overlap or duplicate a requirement/task or a portion of it in more than one user story.

Following issues were found with the submission.

- 3-4 big user stories per iteration were required (8 provided). It was also not mentioned which iteration each user story belongs to.
- Big user stories should be broken down in to small user stories, which means that the cost of big user stories’ should be equal to the accumulated cost of all the detailed user stories it has been broken into.
- Success criteria is not exactly measureable.

Best of luck for the implementation.
